## AVerDiGi EB1304 MOB won Sweden bus project

Transit and school bus agencies around the world are discovering the value of using video surveillance to effectively manage their risks on buses, subways, light rails and in transit stations. Following the tragic events in London in July 2005 and attempted bombings, we have seen an increasing number of projects in the region.

The Sweden bus project is one of the ongoing projects and AVerMedia is extremely proud to be delivering our newest technologies to mobile solutions in CCTV surveillance. This particular project in with total of 61 units installed is another example of the various applications our mobile DVR is selected for.

(Apply EB1304 MOB on train, bullet train and bus)

### EB1304 MOB Profile

Designed to have iStable software, dual shockproof, hot swappable HDD, voltage protection, 7-segment LED, mechanism protection, stable power supply, and VGA output, AVerDiGi EB1304 MOB is rugged enough to withstand the environment and provides excellent power management.

AVerDiGi iStable software supporting all AVerDiGi models can fix the shaking and jolts impact on video with just one click. In addition, we provide 2 windows preview for original and stabilized video. This free bundled video stabilizer software allows for smooth video quality.

Surveillance on transit networks is becoming pertinent and transportation departments are becoming more dependent on CCTV evidence to deter crime. Since mobile applications include school buses, taxis, police vehicles, ambulances and etc. AVerMedia concludes that the future for EB1304 MOB projects is virtually limitless.
